## 1. Introduction

This document describes how to upgrade the extender **OneView SQLReader**

Please note that OneView always needs to be installed whereas the OneView extenders are optional. To install OneView please refer to separate documentation for installation.

### 1.1 The Software Package

OneView software is available as a zipped file from Monsalta. To start building a OneView system, the following components are used:

### 1.2 OneView Software Download

Contact [Monsalta Support](#) to download the latest software package

The download page also contains information on the most important content of the release and if applicable a list of known issues related to this particular release. New software is released on a regular basis. Contact Monsalta in order to get information on the release schedule.

## 2. Upgrade of OneView SQLReader

### 2.1 Included Files

The following files and directories included in the download must be installed:

- OneViewSQLReader32.exe (32-bit executable)
- OneViewSQLReader64.exe (64-bit executable)
- OneViewSQLReader.jar (application)
- html/\*
- conf/\*

### 2.2 Installation Directory

All files are placed in a folder of your choice on your system. This folder is referenced as

ONEVIEW\_HOME\SQLReader

The default value for ONEVIEW\_HOME is \$:\OneView\

## 2.3 Replace Files

1) Stop the service:

```
net stop OneViewSQLReader
```

2) Unpack all files from the installation zip-file to ONEVIEW\_HOME\SQLReader

3) Start the service:

```
net start OneViewSQLReader
```
